Why Attend: FINOS OSinFinance Webinar - Streamlining Open Source Compliance for Financial Institutions

Hosted by FINOS, featuring Turntabl

Date: April 23, 2025 **Time:** 11:00 AM ET / 4:00 PM BST **Location:** Virtual

As open source adoption accelerates across financial services, organizations face a critical challenge: ensuring compliance and mitigating risk without impeding developer velocity. The perceived friction between open source freedom and stringent regulatory requirements often becomes the biggest barrier to adoption and innovation.

In this essential FINOS-hosted session, we will demonstrate how leading firms are overcoming this challenge by implementing automated, developer-friendly compliance solutions.

Join FINOS Member Turntabl as they provide a live, in-depth showcase of **Woodchip**, an open source compliance and security platform. You will see firsthand how Woodchip automates the enforcement of contribution policies, allowing firms to maintain control and visibility while empowering developers to work efficiently.

Furthermore, we will highlight how Turntabl's development of Woodchip is deeply connected to and builds upon their contributions to the FINOS **GitProxy** project. GitProxy is a FINOS-hosted solution specifically designed to enable safe, auditable, and compliant GitHub workflows within regulated financial institutions. This session illustrates how collaborative FINOS efforts are yielding practical tools that solve shared industry problems like achieving frictionless compliance at scale.

🔍 **What You Will Learn:**

Through live demos and discussion of real-world scenarios applicable to financial services, attendees will gain practical insights into how modern open source infrastructure tools like Woodchip and GitProxy can:

- **Eliminate Manual Bottlenecks:** Move away from time-consuming manual contribution approval processes that slow down delivery pipelines.
- **Automate Policy Enforcement:** Automatically apply and enforce your firm's specific compliance and security policies across open source contributions.
- **Detect Violations in Real Time:** Gain the ability to detect and prevent policy and security violations instantly, before they become risks.
- **Streamline Workflows:** See how tools like Woodchip integrate with and enhance GitHub-based development workflows, particularly when combined with solutions like FINOS GitProxy.
- **Accelerate Innovation Safely:** Understand how to increase the speed of innovation and open source adoption within your firm while effectively reducing legal, security, and reputational risk.

Whether your firm is evaluating strategies for compliant open source contributions, exploring tooling like GitProxy, or actively modernizing your internal open source policies, this session provides a valuable blueprint and live demonstration of effective solutions.

👤 Who Should Attend from Your Firm?

This session is highly relevant for individuals and teams involved in open source strategy, risk management, legal review, technology architecture, and engineering leadership within financial institutions, including:

- Open Source Program Office (OSPO) Leads
- Technology Risk, Legal, and Security Teams
- Developer Platform and Tooling Architects
- Engineering Managers and Team Leads
- Active FINOS Project Contributors
